

# ABSTRACT OF THE DISCLOSURE

A low depth tray for bottles is provided which includes a first pair of  
 opposed walls, a second pair of opposed walls attached to the first pair of opposed  
 walls to form a wall structure, a base attached to the wall structure, and a plurality  
 30 of interior divider walls extending upwardly from the base. At least one member  
 projects upwardly from an interior of the wall structure and is connected to the  
 divider walls, where the interior member has a height less than the height of the wall  
 structure and less than the height of bottles loaded in the tray. Together, the interior  
 member, the base, the divider walls, and the wall structure define a plurality of  
 35 bottle retaining pockets which are each sized to receive a single bottle therein.
